Solutions for the connected enterprise

Maarga = Enterprise Communication & Collaboration

$M=EC^2$

Product Development

CLIENT

The Customer is a pioneer in providing Enterprise solutions since 2001, with their operations spread across the globe. A winner of the EMC Partnership Solution award, the organization provides a wide range of solutions and products for more than 200 customers.

BUSINESS CHALLENGE

One of their products integrating Documentum and Domino was dated and had a high dependency on desktop components and operating system. The organization wanted to upgrade their product to support latest versions of Documentum and Domino while adopting an open approach to the system design.

REQUIREMENTS

The organization envisaged a comprehensive automated system that should meet the following key features:

- Enable drag and drop system to make the process simple and easy
- Adoption of webservices components like DFS to minimize desktop dependency
- Facilitate cross platform support
- Make use of standardized components and methodologies to increase the scalability of the solutions provided

MAARGA'S SOLUTION

Maarga adopted Java as the language of choice to provide a modern design for both the User Interface and engineering of the product which removed Operating System constraints. With adoption on webservices for connectivity, the product had no dependency on desktop components.

TECHNOLOGY USED

- Lotus Notes 6.x,7.x,8.x
- Lotus Script & @Formula
- Java
- Documentum
