*Are Your
Notes Applications*
Cloud Ready?

Lotus Notes - Application Audit

The technology and communication needs are growing faster than ever before. With mobile devices flooding the market, companies need to find balance between managing their applications and investment in the same. Traditional businesses report an increase in sale of more than 40% when they create an anytime anywhere access. The strategies include taking applications to cloud or mobile while at the same time keeping TCO same or even decreasing it.
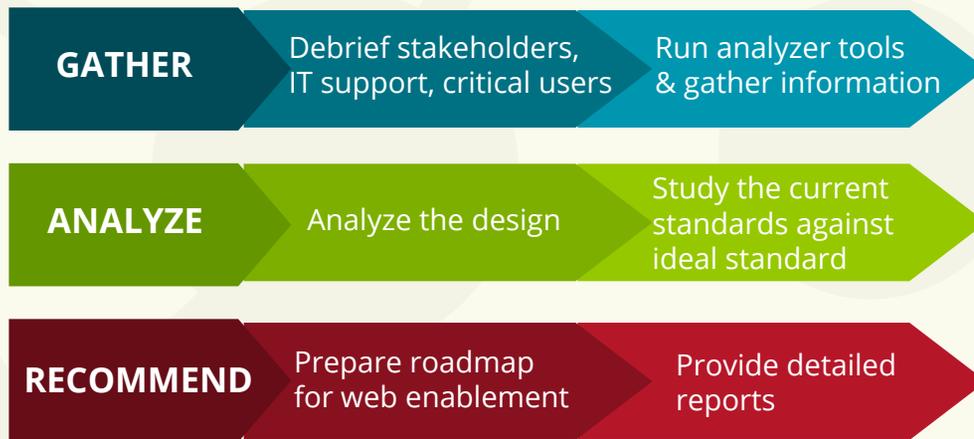

The changing software and market trends can effect the efficiency of Lotus Notes applications. Apps that have been used for a long time may not be optimized due to continuous changing business needs. This results in an increase in complexity and cost of maintenance, and scalability. Additionally, end user device fragmentation can also add to the challenges of enterprise mobility. To cover all aspects, auditing is crucial.

To make best use of the investment in Lotus Notes, and at the same time meet customer expectations, it is crucial to keep the applications efficient and modern. A combination of easy programming, universal adaptation and better looking interface will drive the central point of development. Reusability of programming modules has shown advantages such as the doubling business productivity and cost reduction of 25-40%.

Successful enterprises recognize the need and value of keeping pace with the changing trends. We have handled thousands of applications and can bring in our expertise to help you leverage best practices. The following diagram shows the approach followed in performing an Application Audit.

GATHER — Debrief stakeholders, IT support, critical users — Run analyzer tools & gather information

ANALYZE — Analyze the design — Study the current standards against ideal standard

RECOMMEND — Prepare roadmap for web enablement — Provide detailed reports

Our Approach

Application Audit

Keep your Lotus Notes updated with the ever changing environment.
Enable and support stakeholders by giving them access to optimized mobile applications. As highlighted in a report by CDW, **94% of mobile users in the US said that using smart phone devices and tablets during working periods have made them more efficient.**
We are an IBM Premier Partner and have provided quality Notes development since 2002. Therefore, to help you increase value of Notes, we will conduct an 'Application Audit' to determine all the aspects that need to be fixed.

Our Offering

- Define use cases of application
- Assessment of architecture
- Determining complexity of applications and its constraints
- Study the dependency on other systems
- Review current and ideal standards
- Roadmap reccomendations

Our Expertise

- IBM Connections
- Microsoft Sharepoint
- Microsoft Yammer
- Jive Software
